Name: Karthik Raghunathan

B.Tech (Biotechnology)

M.Tech (Material Resource Engineering)

Experience: Wastewater management, Land Environment Management: Phytoremediation, Bioremediation of wasteland and wastewater, High rate transpiration system for hydraulic management of wastewater, Movement of Persistent Organic Pollutants (POPs) in soil matrix.

Publication:

The present research activities focus on the treatment and reuse of wastewater in irrigation. The dwindling fresh water resources have now put a pressure on the domestic and industrial wastewater for the irrigation. The need to understand and have a framework for proper utilization of wastewater is still a need for the hour.
